

[Document Name]      Abstract

[Abstract]

[Problem] To correct the unbalance of the reinforcing effect provided by short fibers, and to enhance the steering stability while exhibiting excellent on-ice performance.

[Solving Means]      A plurality of sipes 12 are arranged side by side in the circumferential direction on the upper surface S of the blocks 11 that are formed in a tread portion 2. The tread portion 2 is made of short fiber mixed rubber in which 1.5 to 25 parts by weight of short fibers are mixed in 100 parts by weight of rubber component. As the sipes 12 are three dimensional sipes 20, the short fibers are oriented three dimensionally.
